

PLATFORM DEVELOPMENT ENGINEER - INNOVATION PLATFORM

(Incubator AIC - GBU / Startup Fellow / Technical Intern)

ABOUT OPEN IDEA

Open Idea is an AI-powered innovation platform that turns ideas into real apps and prototypes—no coding required.

The Problem: You have an idea, but execution is broken. Knowledge is scattered across 30,000+ journals and 420 million+ code repositories. Finding relevant research is impossible. Hiring developers is expensive. Building from scratch wastes time and money. Result? 90% of Indian startups fail within 3 years, with ₹2,000 Crore wasted annually.

How Open Idea Works: Start with your idea. Our platform offers three integrated components to turn it into reality:

- 1. Research:** Access millions of research papers, datasets, and open-source code in one unified platform. Our AI helps you discover existing solutions instead of starting from zero.
- 2. Build:** Use our AI-powered no-code workspace to remix proven components and create production-ready prototypes. No coding skills required. No expensive developers needed.
- 3. Collaborate:** Connect with a global community of experts, researchers, and innovators who can help refine and accelerate your project.

The Result: What traditionally takes months now takes minutes. From idea to working prototype—fast.

From Idea to App: Search your idea → AI finds relevant research, code, and datasets → Remix components in our no-code workspace → Collaborate with experts → Launch your prototype. That's innovation, democratized.

ABOUT THE ROLE

This is a foundational engineering role building the core infrastructure that powers Open Idea's innovation platform. You'll develop the systems that enable users to go from idea to working prototype—the editor, preview engine, deployment pipeline, and workspace environment. We're looking for a full-stack engineer who thrives on building robust, scalable platforms and can architect systems that handle AI-generated code, real-time

previews, and seamless deployments. Your work will directly enable thousands of users to build without writing code.

KEY RESPONSIBILITIES

- **Idea-to-App Platform Development (Q1 2026):** Build and maintain the core platform infrastructure including the no-code editor, real-time preview engine, and automated deployment pipeline with 95%+ success rate.
- **Editor & Workspace Engineering:** Develop intuitive editing interfaces, file management systems, component libraries, and collaborative workspaces that make building accessible to non-developers.
- **Preview & Build System:** Implement robust preview mechanisms that render AI-generated code in real-time, handle dependencies, run build processes (esbuild, Vite, Webpack), and display live results.
- **Deployment Pipeline:** Build automated deployment workflows that push user projects to Vercel/Netlify with zero manual intervention, handle environment variables, and manage production configurations.
- **Backend Infrastructure:** Design and implement APIs, database schemas, authentication systems, file storage, and server-side logic that power platform features.
- **Performance Optimization:** Ensure prototype generation completes in ≤ 2 minutes, optimize build times, reduce bundle sizes, and maintain $\geq 99\%$ platform uptime.
- **Debugging & Reliability:** Proactively identify and resolve platform-level execution issues, build error logging systems, implement monitoring, and ensure zero critical failures in production.

EXPECTED DELIVERABLES

- **Production Platform:** Fully functional Idea-to-App platform with editor, preview, and deployment features ready for beta launch (Q1 2026).
- **Preview Engine:** Real-time preview system that accurately renders React, Vue, HTML/CSS/JS projects with full dependency resolution and hot module replacement.
- **Deployment Integration:** One-click deployment system integrated with Vercel/Netlify that handles build configurations, environment setup, and domain management.
- **Workspace Features:** Collaborative workspace with file management, version control, project templates, component library, and user project history.
- **Monitoring Dashboard:** Real-time platform monitoring tracking preview success rates, deployment status, build times, error logs, and system performance.
- **Technical Documentation:** Comprehensive developer documentation covering platform architecture, API specifications, deployment workflows, and troubleshooting guides.

KPIS / EVALUATION CRITERIA

- **Preview Success Rate:** $\geq 95\%$ of AI-generated projects preview correctly without errors
- **Deployment Success Rate:** $\geq 98\%$ of deployments complete successfully without manual intervention
- **Build Performance:** Prototype generation time ≤ 2 minutes from AI output to live preview

- **Platform Uptime:** $\geq 99\%$ uptime for core platform features (editor, preview, deployment)
- **Zero Critical Failures:** No production-breaking bugs or platform crashes affecting user experience
- **Error Resolution Time:** ≤ 4 hours for critical issues, ≤ 24 hours for major bugs
- **Code Quality:** $\geq 80\%$ test coverage for core platform features with automated CI/CD pipelines

ELIGIBILITY & IDEAL CANDIDATE PROFILE

- **Educational Background:** Pursuing or completed degree in Computer Science, Information Technology, Software Engineering, or related fields—or demonstrated software development expertise.
- **Frontend Development:** Strong proficiency in JavaScript/TypeScript, React.js (or Vue.js), HTML/CSS, and modern frontend frameworks. Experience building interactive UIs and SPAs.
- **Backend Development:** Solid understanding of Node.js, Express/Fastify, REST APIs, database design (PostgreSQL/MongoDB), and server-side architecture.
- **Build Tools & Bundlers:** Hands-on experience with modern build tools (esbuild, Vite, Webpack, Rollup), module bundling, code splitting, and dependency management.
- **DevOps & Deployment:** Familiarity with deployment platforms (Vercel, Netlify, AWS, Docker), CI/CD pipelines, version control (Git), and cloud infrastructure.
- **Full-Stack Thinking:** Ability to architect end-to-end features from database schema → API design → frontend implementation → deployment.
- **Problem-Solving Skills:** Strong debugging skills for complex technical issues, performance bottlenecks, and cross-browser compatibility challenges.
- **Code Quality:** Experience with testing frameworks (Jest, Vitest, Cypress), code reviews, clean code principles, and maintainable architecture.
- **Tool Proficiency (Preferred):** Experience with WebContainers, CodeSandbox architecture, Monaco Editor, Serverless functions, or real-time collaboration tools.
- **Self-Starter Attitude:** Proactive in identifying technical challenges, proposing solutions, and shipping features independently with minimal supervision.
- **Bonus Points:** Contributions to open-source developer tools, experience building code editors/IDEs, or personal projects involving sandboxed code execution.

WHY JOIN OPEN IDEA?

- **Be a Category Creator:** Help build India's first AI-powered unified innovation platform from the ground up—be part of a high-growth startup poised to redefine how innovation happens.
- **Own Your Impact:** Build the core infrastructure that thousands of users depend on daily. Your code enables non-developers to create real products.
- **Learn & Grow:** Exposure to cutting-edge technologies (AI code generation, sandboxed environments, serverless architectures), full-stack development, and startup engineering culture.
- **Work with a Mission:** Democratize innovation and make global knowledge accessible to everyone—from students in classrooms to researchers in labs.

- **Flexible & Collaborative:** Join a lean, high-energy team where your ideas matter and execution speed is celebrated.

HOW TO APPLY

Send your resume, GitHub profile, and a brief note explaining why you're excited about Open Idea to: **info@openidea.world**
